

Year: 6  
Term: Summer 2  
Topic: Creating Media - Webpage Creation

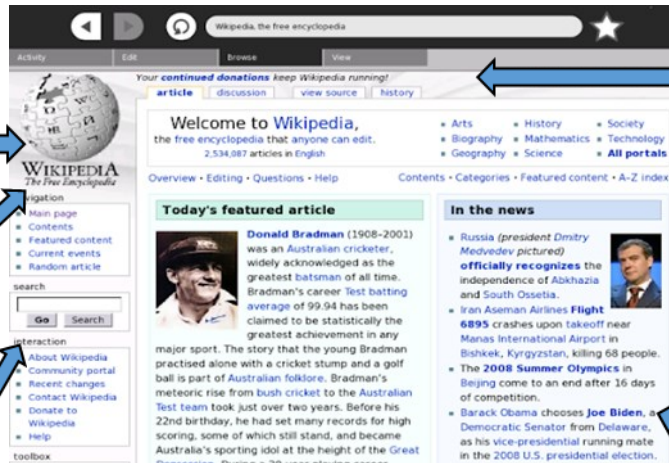

A **webpage** is a hypertext document that is a part of the World Wide Web.

Websites are a collection of webpages about the same topic. They can be found using browsers.

Websites are created for a chosen purpose, and with a particular audience in mind. They include navigation paths, and must adhere to copyright and fair use of media rules.

The website name is usually visible in large font, particularly on the home page.

There is often a slogan/ logo and short description of what the website is about.

The search allows you to find different things on the website.

Webpages are made up of a code called Hypertext Markup Language (HTML). You can find this by right-clicking on a page and selecting 'Inspect.'

### Features of a good webpage

The menus at the top of the page allow you to look at different parts of the website.

Pictures are used to highlight what the text is about. Colours are used carefully.

There are links to other areas of the website/ World Wide Web (in blue).
