

Year: 5

Term: Autumn 1

Topic: Computer Systems and Networks -
Systems and Searching

St Dennis Primary Academy

"Everyone matters, everyone succeeds, every moment counts"

Information technology (IT) includes computers and things that work with computers.

Computers are made up of **Input Process and Output (IPO)** components. **Inputs** (something that sends a message to the device), **processes** (the way the device acts on the message) and **outputs** (something that is sent out by the device).

Washing Machine:

Input: Dials and buttons.

Process: The computer inside follows a program.

Output: The clothes are washed and the display shows the remaining time.

DVD Player:

Input: The disc is inserted and play is pressed on the remote.

Process: The system reads the information on the disc

Output: The screen displays the movie/ show.

Smart Locker:

Input: The customer scans in a barcode.

Process: The code is recognised by the system.

Output: The correct locker is opened.

Transferring Information

Protocols are an agreed way of doing something. When we communicate, we use an agreed set of protocols (greeting, speaking, listening, etc.).

In computing, agreed protocols are the way that computers communicate with one another.

The digital information they send is called a '**packet**'.

Media, files and information can be shared on the internet either privately via email/cloud space or publicly on websites.

Computers and their users are not always in the same place as one another.

With billions of computers around the world, computers need to send the information to the correct place.

To do this, computers use special addresses called **IP addresses**. They may look like this:

From: 216. 58. 1. 214

To: 216. 64. 1. 20

My IP Address
63.255.173.183

Glossary

chat

A text communication via keyboard in real time between two or more users on a local network (LAN) or over the Internet.

connection

A special pathway that lets computers talk to each other

digital

Uses electronic signals.

Collaborating is another word for working together on something, to reach a shared goal.

The internet can be used to help people collaborate online, even when they are a long distance apart!

'**Chat**' functions can be used keep each other updated with new information.

Shared '**cloud**' spaces and online drives can allow one or more person to have access to/ edit documents.

When building upon someone else's work, you need to be aware of **copyright** and intellectual property rules.
