### Ovaries

There are two ovaries – they are connected to the uterus by the fallopian tubes. The ovaries contain the female sex cells which are called eggs or ova.

### Uterus

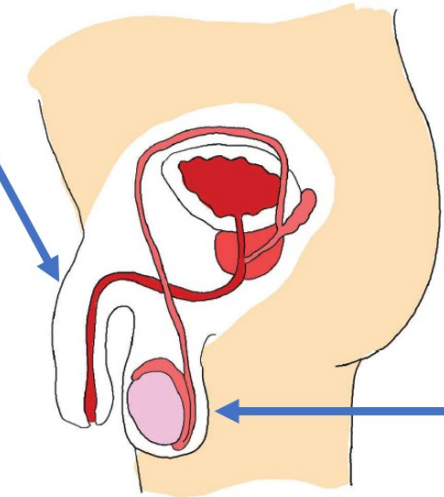

The uterus is sometimes called the womb. If a female chooses to have a baby the uterus is where the baby develops

### Vagina

The vagina is the passageway that connects the uterus to the outside of the body.

### Penis

The penis usually is soft and hangs down. Sometimes the penis becomes hard and stands out from the body. This is called an erection.

### Testicles

There are two testicles behind the penis – they are held in a sac of skin called the scrotum. During puberty the testicles start to produce the male sex cells which are called sperm.

## Glossary

### lifecycle

The series of changes in the life of an organism including reproduction.

### menstruation

The scientific name for a girl/woman's period.

### puberty

The period during which adolescents reach sexual maturity and become capable of reproduction.

### reproduction

The production of offspring or children.
